

# Restoring Europe's Rivers

## NEWS ITEM

### Want to know more about river restoration in Europe?

The RESTORE partnership has developed a [RiverWiki](#) which is something like a Wikipedia for river restoration projects.

The RiverWiki lets you share, find and comment on river restoration practice and projects all across Europe.

By adding your own projects to the RiverWiki the best ways of carrying out river restoration will quickly emerge and it will also create a central repository of information.

We now have over 300 projects on our site from all over Europe. You can, for instance, search to find all the case studies in [France](#), all the ones that have had monitoring on them, or explore how much it costs to carry out river restoration in northern Europe.

The RiverWiki has been developed by the RESTORE partnership for river restoration in Europe. Our partners include the [River Restoration Centre](#), [Wetlands International](#), [Government Service for Land and Water Management](#) (Netherlands), [Finnish Environment Institute](#) and [Italian Centre for River Restoration](#).

Between us we hold an increasingly large amount of information on river restoration projects which we are putting on the River Wiki. We are also developing our [website](#) ([www.restorerivers.eu](http://www.restorerivers.eu)) to become the centre of good practice and news on European river restoration.

### What do I need to do?

Just log in, it only takes a couple of minutes, and add your project whether it is planned, in progress or completed.

If you can recommend any useful research or guidance or need further information please [email us](#).

The RESTORE project is made possible with the contribution of the LIFE+ financial instrument of the European Community

and works in partnership with
