

WS 1 - Principles for Basin Level Rehabilitation and Monitoring for Fisheries

Facilitators: Phil Roni, Gerd Marmulla

The objective of this final session will be to bring the speakers together to produce guidelines on planning and monitoring of rehabilitation at a basin scale (headwaters to estuary).

- Number of participants – 20 – including the speakers from Sessions I and II. We will initially divide them into two smaller working groups: one on planning and prioritization, one on monitoring, we will then bring them back together in the final 30 minutes for a combined discussion.
- Format – Facilitated discussion
- We will send framework questions 2 months before workshop and require participants to respond 1 month before workshop. We will synthesize the response to these questions and use them for discussion at the workshop. This will help make workshop efficient, productive, and assure we accomplish our objectives in a short period of time.
- Products – Synthesized recommendations on Basin Level Rehabilitation for Fisheries
