# Motivations, objectives and main features of the experience

## - *motivations:*

1. Volzhky HPP;

2. Local development initiatives;

3. At Lake Sotovo dikes and dams were constructed.

Motivations, objectives and main features of the experience

## - *objectives:*

Main aim: re-install the natural flooding regime at the Sotovo lake

To reach the aim:

1. decommission an earthen dam;
2. construct a water level regulation installation

Motivations, objectives and main features of the experience

- *main features of the experience:*

## 1. Digital Elevation Model;

## 2. Supply the lake with water;

Motivations, objectives and main features of the experience

- *main features of the experience:*

3. The restoration of hydro biotic flora and fauna;

4. Monitoring.

# Main outputs/outcomes

## The Digital Elevation Model

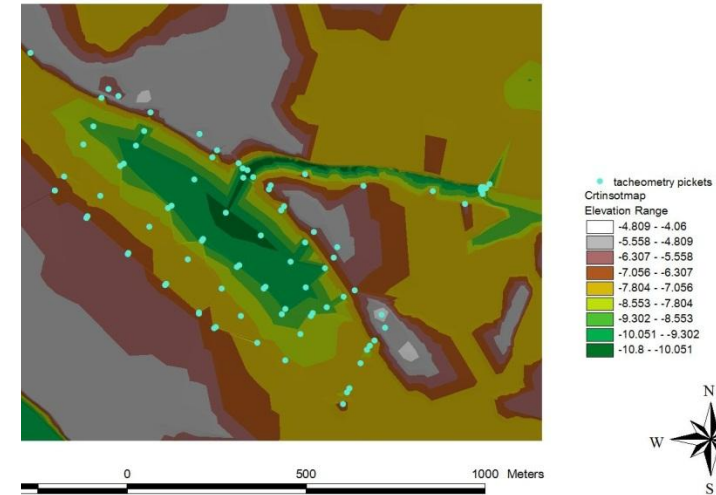

The cross-section along the lake

Cross-section A-B

The DEM of the Sotovo lake Area

# Main outputs/outcomes

## Supply the lake with water

## Main outputs/outcomes

### The restoration of hydro biotic flora and fauna

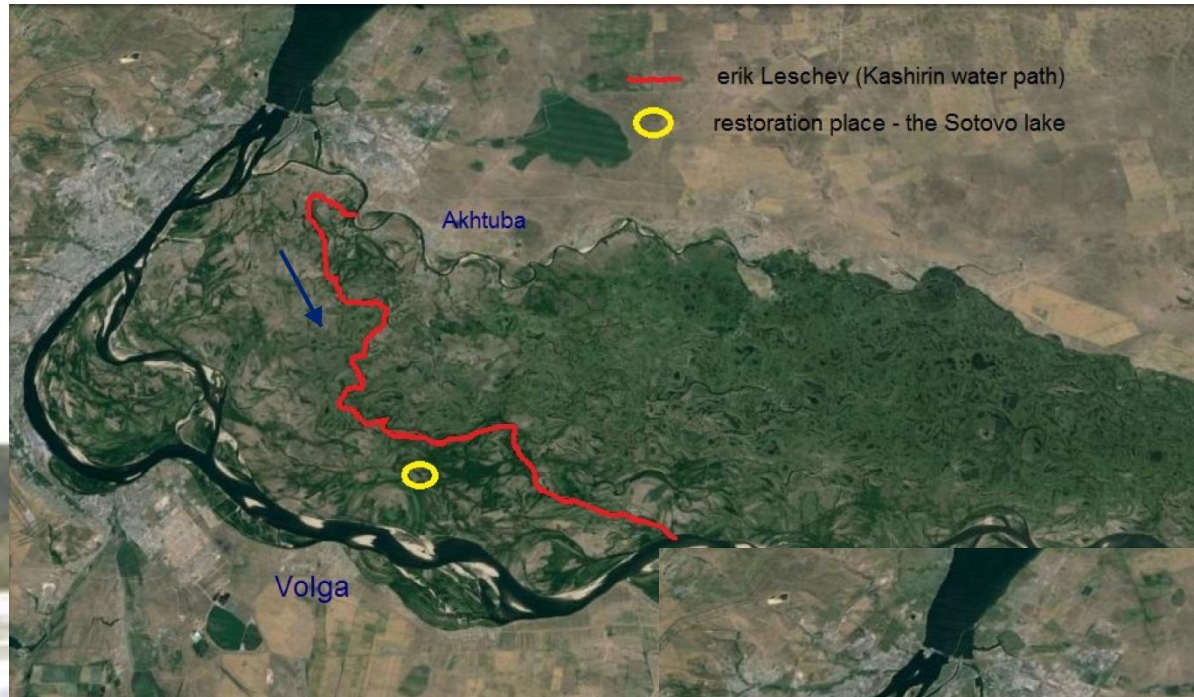

# Main outputs/outcomes

## Monitoring

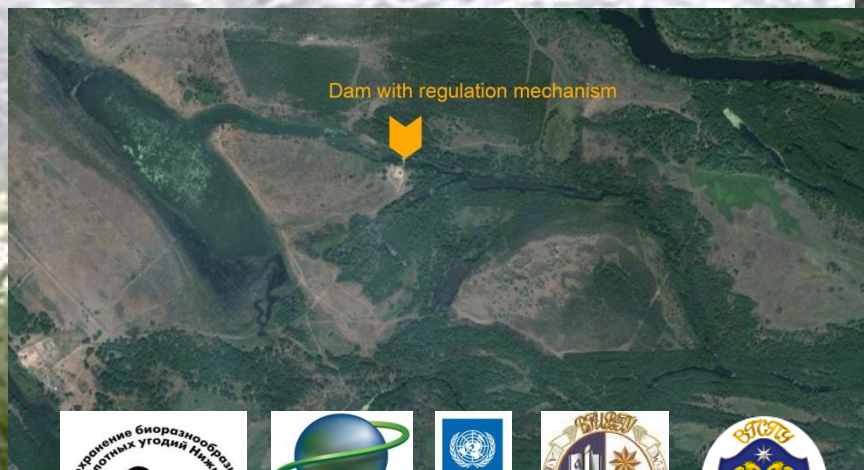

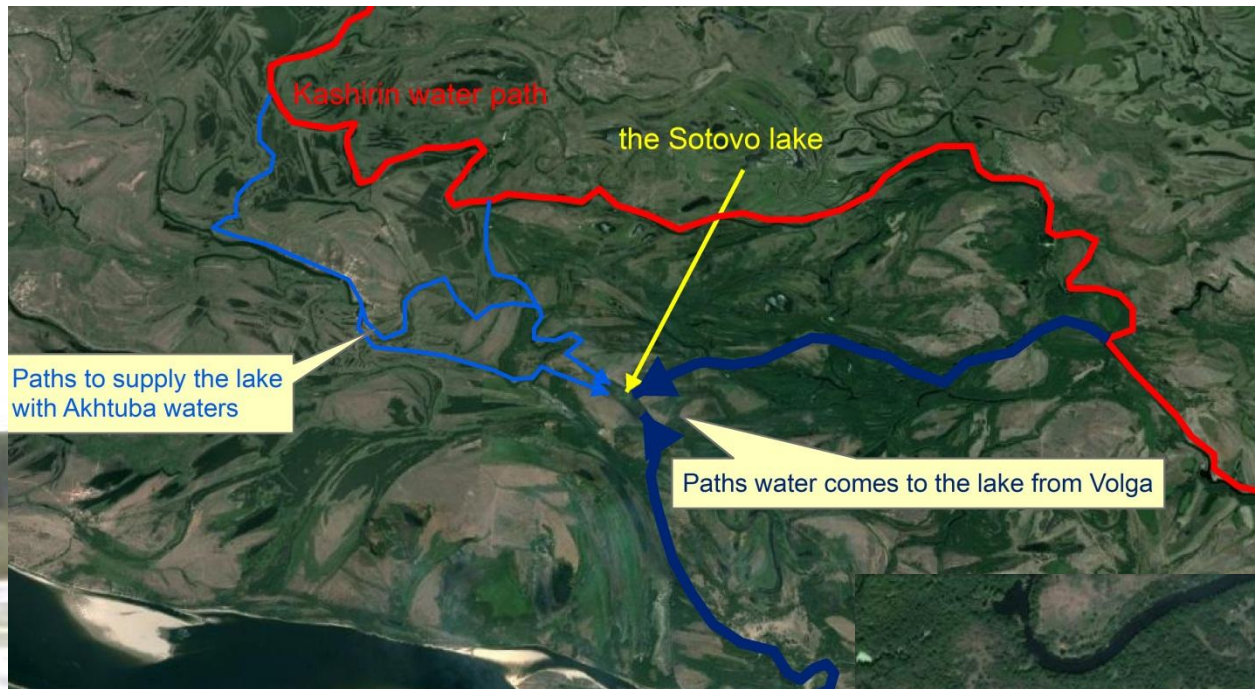

# Lessons learned and final remarks

To restore an aquatic ecosystem successfully:

1. Study the previous experience of colleagues around the World;
2. Intensively study the territory up flow the place you want to restore;
3. After the initial works on the restoration organize monitoring and provide resources for correction.

It is quite a new experience for all the authors.

Everyone who has an incentive to help is very welcome.

Thank you for your attention!!!
